Do you feel like you have a better understanding of groundwater dependent ecosystems and how they impact our local community?

No

Do you feel like you can now connect how surface water impacts groundwater and vice versa?

No

Is there anything that you didn't understand from today's presentation? If so, what was it?

This was my first time attending a public presentation by the SCV Waterboard, and I joined the zoom wanting to understand the relationship between groundwater and surfacewater. However, from the very beginning it was very difficult to understand, and seemed more like a presentation for the people who already understood what was happening rather than for regular people to understand the water ecosystems for SCV.

Do you have any other feedback or questions you would like to provide to us at this time?

I thought displaying graphs for visual information was great. Can the presentations expand on why the graphs are collecting the data that they are collecting and what that entails for our water usage? I was also confounded by the acronyms and am curious if the Waterboard can provide a document with the definitions of those acronyms for the next time they are used.

Would you like a response to your question? If so, please provide your name and preferred contact information.

Yes, please. My name is Candace and my email is candacesfiles@gmail.com. Thank you!

Yes

Do you feel like you can now connect how surface water impacts groundwater and vice versa?

No

Is there anything that you didn't understand from today's presentation? If so, what was it?

But how does all this connect to our sewage system?

Do you have any other feedback or questions you would like to provide to us at this time?

I'm wondering if SCV has grey water use policy, and where's it being implemented and grey water being used? and what percentage of it overall in water use?

Would you like a response to your question? If so, please provide your name and preferred contact information.
